

Case Study—Japanese Knotweed

KEY FACTS

Who	Manchester City Council
What	Japanese Knotweed & Giant Hogweed Remediation
Where	Manchester
How much	Confidential
How long	Term Contract

THE BENEFIT

As part of a widespread and coordinated treatment programme, we are helping Manchester City Council to eradicate Invasive Species from land within their ownership and to cut costs by dealing with the problem in a holistic manner.

THE PROJECT

Following a successful OJEU tender process, The LK Group was awarded the contract for treating over 50,000m² of Invasive Species for Manchester City Council, including Japanese Knotweed and Giant Hogweed. The project involves the survey, identification, mapping and treatment of Invasive Species within the northern and eastern parts of the city and the city centre itself.

THE SOLUTION

During lengthy discussions we have jointly planned a remediation programme to attack Japanese Knotweed and Giant Hogweed in a coordinated and planned fashion.

Following initial treatment, either through foliar application or injection, we reassess the regrowth on an annual basis and amend our methodology to suit.
